# Halal You Can Eat

By Anjola, Elizabeth, Fritz, Syed, and Zuhaeer

About Our App

- Help the Muslim community easily find restaurants that have halal options based on their location and craving

- Allow users to add restaurants that they find to expand the overall options
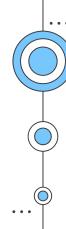

Functionality

- Allows for users to filter restaurants based on cuisine, city, and name of restaurant

- When a user clicks on the restaurant page, they can view the location, cuisine, rating, website, and all reviews written for that restaurant
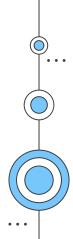

- When logged in, users can write a review for a restaurant, add a restaurant to the database, and save a favorite restaurant to the user's profile
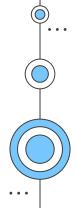

Technical Architecture

- HTML/CSS, JS (Google Map API), Ruby, Rails

- The Google Map API, Restaurant API, and Email API were the most challenging parts
  - Also, the parts that goes beyond the minimum RORT
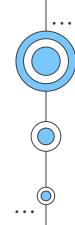

- Geocoder, Ransack gems

Our Approach

- Testing
  - Make sure we have lots of tests and test often

- Continuous Integration/Deployment
  - Integrate during weekly meetings (if we have merge conflicts)
  - Don't push to main until it's been thoroughly tested

- Division of work
  - Pair and/or individual work (depending on task size)

- Proud of communication ability throughout the team

What Can Be Improved?

- Map reload issue

- Categories for cuisines

- Account activation

- Transfer to mobile app

- Points accumulator
